Objective

The objective of this task is to understand the fundamentals of Android application development using Kotlin and Jetpack Compose. The project focuses on creating a simple Notes Application that enables users to view and manage notes through a modern and interactive user interface.

Project Description

The Notes Application is a single-screen Android application developed using Kotlin and Jetpack Compose. It displays a list of notes and provides users with the ability to add new notes using a Floating Action Button (FAB).

Tools and Technologies Used

- Android Studio
- Kotlin
- Jetpack Compose
- Material 3
- ViewModel

Features Implemented

- Display notes in a list
- Floating Action Button for adding notes
- Material 3 based UI
- ViewModel state management
- Responsive design

Future Enhancements

- Room Database Integration
- Edit and Delete Notes
- Search Functionality
- Dark Mode Support

Conclusion

This project provided practical experience with Android Studio, Kotlin, and Jetpack Compose and strengthened understanding of modern Android development concepts.
